

Boys & Girls Club of Umpqua Valley

Roseburg, Oregon

Administrative Reception

Gymnasium Floor #1

Café

The Boys and Girls Club of the Umpqua Valley are another local non-profit group which benefited greatly by a Ford Family Foundation Grant and a local fundraiser. The club was able to purchase the old Batting USA building, over double its size with an expansion, and completely remodel and add a future second floor. The expansion included a second gymnasium, teen center, multipurpose activity room, computer lab, art classroom, kitchen and café, classrooms and administrative offices.

The existing building was a pre-engineered metal building and to keep costs down and maintain the character of the existing building the new addition matched the old in terms of construction type. The interior transformation however is astonishing.

One step into the facility and the color schemes assure you that this is a place for kids to have fun. Kris Besson, Executive Director can tell you what an amazing place for kids the new facility is and how much they love coming here. The ability to multi task and carry on multiple activities within this facility is truly exceptional.

The Boys and Girls Club was one of the projects that fit Paul L. Bentley, Architect perfectly, as it was one to help young people become better adults. I am personally very proud of how this project turned out.
